Data source

CGA's Geotweets Archive

- A global record of tweets spanning time, geography, and language; extending from **2010** to the present; about **10.3 Billion**
- The primary purpose is to make a comprehensive collection of geolocated tweets available to the research community
- Stored on [Harvard's High Performance Computing Cluster](#) to provide easy access to both the dataset and processing tools in an integrated environment for Harvard users
- Extremely useful not only for geospatial research but also research involving Social Science, Business and Humanitarian studies
- More details here: <https://gis.harvard.edu/geotweet-archive-v20>
- To request access to this data: <https://gis.harvard.edu/geotweet-request-form>

Data source

Enrichment of the Geotweets Archive

- Harvard CGA and [MIT SUL](#) have collaborated to conduct research on the use of social media data to study the effects of climate change on people's well being
- To achieve this objective every tweet in was enriched with two important variables: **Sentiment** and **Geography**
- Advanced GIS Data Science (GPU database [OmniSci](#)) and Machine Learning techniques were used on [Harvard's FAS Research Computing Cluster](#) for processing
- First time enrichment has been achieved on this large scale involving about 10 Billion tweets
- Useful for a wide range of research applications involving the use of Sentiment and Geography on Twitter data

Future Plans: Real-time Collection and Processing of Weibo Data

- Build a high-performance system for real-time collection and processing of data from Sina-Weibo, second largest social media platform in China

Objectives of this projects are:

- Develop a comprehensive global social media data archive using Twitter and Sina-Weibo; fill the spatial gap in our archive
- Develop a High-Performance Computing environment to enhance the processing capabilities for big geospatial datasets
- Develop social media based case studies to explore ways in which this data can be applied to policy making, event response and global comparison studies
- Develop training programs for using data science and high-performance computing for handling big geospatial datasets

Weibo User Historical Geotagged Posts Dataset

- [MIT SUL](#) has constructed a unique dataset which contains geotagged posts from Sina-Weibo, the biggest social media platform in China
- This panel data contains 9.95 million posts generated by a cohort of 447 thousand active users
- 3 years of data ranging from January 1st 2018 and June 30 2021
- More information of this dataset can be found [here](#)
- Researchers may request the access to the dataset via filling out this contact [form](#)

Weibo Mobility Index Data

Why Weibo Mobility Index?

- An open index for multi-scale mobility in China
- Baidu Qianxi Index (discontinuous time span)
- Combined with Tweet for global Mobility Index

SINA Weibo

Background

China's second most popular social media platform

1

Data source

The screenshot shows a Weibo post from the official account of Xinhua News Agency (新华社). The post is dated '今天 01:51' (Today 01:51) and has over 20,000 retweets. The content is a video description with the following text: **【#爱和友谊永不落幕#】** 昨晚，北京冬奥会已落下帷幕，但所有美好的场景仍将久久留在我们心中。这是“自古英雄出少年”的勇敢，是永不言弃的坚持，是一朝圆梦的激动，是英雄相惜的敬重，更是运动场上新人意气风发、老将风采依旧的温情和感动.....**#雪容融即将上班#**，期待3月4日北京冬残奥会的到来! 展开

The video thumbnail shows a large group of performers in white costumes on a stage, surrounding a large, illuminated snowflake-shaped structure. The structure has a central snowflake and is surrounded by a circular arrangement of white, leaf-like or petal-like elements. The stage floor is lit with blue light.

At the bottom of the post, there are three icons: a share icon with '1532', a comment icon with '304', and a like icon with '16593'.

File List

For Each Year (2018-2020)

Tables for provinces (n):

Weekly tables (one table for all weeks):

Weekly out-flows between provinces by counts ($n \times \text{number of weeks} \times n$)

Weekly in--flows between provinces by counts ($n \times \text{number of weeks} \times n$)

Monthly tables (one table for all 12 months):

Monthly out-flows between provinces by counts ($n \times \text{number of months} \times n$)

Monthly in--flows between provinces by counts ($n \times \text{number of months} \times n$)

Yearly tables (one table for each year)::

Yearly out-flows between provinces by counts ($n \times n$)

Yearly in--flows between provinces by counts ($n \times n$)

Mobility scales by province

Weekly out-flow total scales by province ($n \times \text{number of weeks}$)

Weekly in-flow total scales by province ($n \times \text{number of weeks}$)

Monthly out-flow total scales by province ($n \times \text{number of months}$)

Monthly in-flow total scales by province ($n \times \text{number of months}$)

Yearly out-flow total scales by province ($n \times 1$)

Yearly in-flow total scales by province ($n \times 1$)

Tables for cities (m):

Weekly tables (one table for each week):

Weekly out-flows between cities by counts ($m \times \text{number of weeks} \times m$)

Weekly in--flows between cities by counts ratio ($m \times \text{number of weeks} \times m$)

Monthly tables (one table for each month)::

Monthly out-flows between cities by counts ratio ($m \times \text{number of months} \times m$)

Monthly in--flows between cities by counts ratio ($m \times \text{number of months} \times m$)

Yearly tables (one table for each year)::

Yearly out-flows between cities by counts ratio ($m \times m$)

Yearly in--flows between cities by counts ratio ($m \times m$)

Mobility scales by city

Weekly out-flow scales by city ($m \times \text{number of weeks}$)

Weekly in-flow scales by city ($m \times \text{number of weeks}$)

Monthly out-flow scales by city ($m \times \text{number of months}$)

Monthly in-flow scales by city ($m \times \text{number of months}$)

Yearly out-flow scales by city ($m \times 1$)

Yearly in-flow scales by city ($m \times 1$)

Discussion

Prospective Applications

- ❑ Spatiotemporal changes in regional connectivity pre and post pandemic
- ❑ Predictability and detection of emerging events and shocks
- ❑ Assessment of shock impacts on population, business and economy
- ❑ Understanding the motivation of mobility and spatiotemporal difference
- ❑ Identification of long-term/short-term and intra/inter-region mobility
- ❑ Urban / Rural vitality index
